**Final Polling Results on Georgia Presidential Race Released
By Landmark/RosettaStone**
Gingrich 44%, Romney 23%, Santorum 17%, Paul 7%

(Atlanta)—The final Landmark/RosettaStone poll of the Georgia Presidential Preference Primary was jointly released by Landmark Communications and Rosetta Stone Communications Monday morning.

The poll, conducted Sunday night of 901 Likely Republican Presidential Primary voters concludes that former House Speaker Newt Gingrich enters the final day with a strong 44%, former Governor Romney with 23%, former Senator Rick Santorum 17% and Congressman Ron Paul with 7%; 9% of voters are undecided.

Gingrich's support has continued to climb during the closing weeks in the state he represented in Congress for two decades. His support has risen two additional points over the final weekend.

Gingrich leads in both the Metro Atlanta region as well as non-Metro Atlanta area. He retains particular commanding support among those voters who are age 65 and older, a demographic group in which he carries a majority of the vote. These voters remember Gingrich as a leader who led Republicans to a new House majority in the 1994 elections, the first such majority in four decades.

“Barring any last minute fumbles by the Gingrich campaign, he will win Georgia,” said Mark Rountree, President of Landmark Communications.

“With no major media shifts occurring over the final weekend, Gingrich is poised for a substantial win,” said John Garst, President of Rosetta Stone Communications in Atlanta.

METHODOLOGY

Landmark Communications, Inc and Rosetta Stone Communications conducted a statewide poll of 901 Likely Voters in the Georgia Republican Presidential Preference Primary. Only voters who were interviewed and fully completed the survey were tabulated in the results. The poll was conducted Sunday, March 4, 2012, and results reflect only respondents who stated that they intend to vote in the 2012 Republican Presidential Primary.

The poll was conducted by telephone using IVR technology. The margin of error on the survey is 3.25%. To be consistent with previous and projected voter turnout, results are weighted based on race, age, and gender.
